Waxes of Superior Quality Since 1852

Bee's Milk (Paraben Free)

(Wax# 437B)

Bee's Milk is an all-natural dispersion of Beeswax in water. Bee's Milk makes it possible to 'Cold Formulate'. A formulator is able to get the benefits of beeswax in a formulation without having to heat that phase of the formula.

The lipid composition in the Bee's Milk mimics that of the natural lipid composition of the skin, thus copying the skin's own natural secretions, proving that Bee's Milk is nature's emollient.

Bee's Milk is stabilized, and is compatible with surfactants and other compounds of high ionic strength.

Formulating Advantages:

Cold Formulating
Water, Glycol, and Alcohol Dispersible
Ease of Handling
Film Former / Barrier
Emollient
Highly Stable
Opacifier
Enhances Skin Feel

Uses:

Skin Care Formulations
Sun Care
Shampoos, and Conditioners
Spray, Pumps, and Aerosols
Pads and Pre-moistened Towellettes
Color Cosmetics

Regulatory:

CTFA / INCI Name: Beeswax, Sesame Oil, Lecithin, Sorbitan Stearate, Caprylyl Glycol, Phenoxyethanol, Hexylene Glycol, and Water

CAS #: 8012-89-3, 8008-74-0, 8002-43-5, 99-76-3, 1338-41-6, 117-86-8, 122-99-6, 107-41-5 and water.

Toxicological Data: No Irritation Potential
