

SZG-PDS-NA-Scripset 745-R2

Scripset™ 745 surface sizing agent

Product Description

Scripset™ 745 surface sizing agent is a water solution (11% solids) of styrene: maleic anhydride (1:<1 mole ratio) copolymer with approximately a 180,000 weight average molecular weight. The maleic groups have been esterified with a low molecular weight alcohol, and reacted to form the sodium salt.

It is typically used as a sizing agent applied to the surface of paper.

Product Application

Scripset 745 finds application as a dispersant, emulsifier, binder, surface sizing agent, and viscosity modifier.

It can be applied neat at the size press, calender stack or coater, or in combination with other additives such as starch, polyvinyl alcohol and fluorocarbon when the application solution pH is maintained in the range of 7.5-9.0.

Scripset 745 is especially effective for improving ink jet print quality and will aid starches in building porosity and film forming.

Scripset 745 is to be used in accordance with control procedures Solenis establishes for a specific application.

Benefits

- No ammonia odor
- Water soluble
- Freeze/thaw stable
- Easy to handle
- Excellent sizing against a variety of penetrants when applied over alkaline or acid base sheets

Packaging

This product is available in a variety of packaging sizes. Your Solenis representative will recommend the appropriate packaging for the application.

Important Information

Typical Properties: Refer to the Safety Data Sheet (SDS).

Regulatory Information: Refer to the SDS or contact your sales representative for any additional regulatory and environmental information.

Safety: Solenis maintains an SDS for all of its products. Use the health and safety information contained in the SDS to develop appropriate product handling procedures to protect your employees and customers.

Our SDS should be read and understood by all of your supervisory personnel and employees before using Solenis products in your facilities.
