Description:
Chromium Oxide Green 5371 is a high-tinting strength inorganic green pigment made by reducing alkali chromates obtained from chrome iron ore to chromic oxide under very high processing temperatures. After cooling, the resulting powder is micronized for ease of dispersion. This produces a pigment of high degree of durability, particle hardness and a spherical shape. Its primary use is in coatings, colorants, plastics, paper, adhesives, rubber, buffing and abrasive compounds and other specialty applications. In addition, it meets ASTM C979-82 standards and therefore is suitable to color concrete, stucco or other cement-based products. Chromium Oxide Green 5371 is color-stable in processing temperatures up to 1000°C (1832°F). It is not of sufficient purity for use in packaging or articles that come in contact with food (21CFR) or for the direct coloration of food or cosmetics. It meets specifications: TT-C-306 and TT-P-347. All Chromium Oxide Greens are stable under exposure to sunlight and UV radiation and are alkali, chemical and weather resistant. Chromium Oxide Green 5371 is packaged in 55 pound (25 kilo) multiwall paper bags and shrink-wrapped onto pallets of 2200 pounds (1000 kilos).

Uses:
Paint, plastics, rubber, colorants, powder coatings, adhesives, ink, vinyl, abrasives, polishes, concrete, stucco, and plaster.
